G. MASON, B. TEVLIN (sub-sub)

Let  $x$  gms be the weight of ice.

Water equivalent of calorimeter =  $(.094 \times 100)$  gms;  
= 9.4 gms

Heat gained = Heat lost

$$80x + 18x = 24(300 + 10.34)$$

$$\therefore 98x = 7448.16$$

$x$
